NEW FONT DISK # 3

New Font Parameters

As in the manual, it is helpful to know the size of the letters that you are using. The frame size is not the letter size but rather, the size of the frame in which the letter set was created. Each letter may or may not take up the entire area that was allowed. Obviously, the lowercase letters do not take as much room as the uppercase and a capital "I" will not be as wide as a capital "M". The frame size is expressed in print dots.

Also noted in the chart below, are the upper and lowercase availability of the font. Most fonts have both upper and lower case but some do not. "Y" in the column indicates that the font has the specified case and "N" means it does not have lowercase but, in most cases, the upper case will be repeated so that you need not worry about a character dropping out. Also, Not all fonts have complete keyboard characters. Non-essential characters have been left out of some of the more unique fonts.
